Engine Plant

On March 11, 1987 the ~~Environmental Response Division~~ notified MDNR it had discovered on a back lot some corroded drums of waste that were apparently improperly disposed of some twenty years ago. The notification advised an outside consultant had been retained to investigate the matter.

On June 1, 1987 MDNR Detroit District was advised of the findings of the investigation and that a meeting with MDNR would take place to review the investigation's scope and protocols and findings, and to present our proposals for a voluntary clean-up at the site.

That meeting took place July 23, 1987 with Mr. M. A. Czuprenski of the Environmental Response Division's Detroit District Office. Findings, further investigative work contemplated and site remediation planned under MDNR oversight were reviewed. At the conclusion of the review, Mr. Czuprenski suggested we communicate with interested Lansing and other staff the findings and planned action to ensure that a coordination of planning occurs at the outset. We believe the suggestion has merit and will be pleased to meet with staff.

Mr. Czuprenski has made arrangements for us to meet and make a repeat presentation starting at 10 AM, August 4, 1987 in Lansing at the Transportation Building, 2nd floor (Design Division) Conference Room.

You and your staff are invited to attend.
